

## TCS IPA (ITIS) – Windows Server 2022 MCQ

**Q1. Which Windows Server edition is best suited for a small business with up to 25 users?**

A) Standard Edition

**B) Essentials Edition** 

C) Datacenter Edition

D) Azure Edition

**Explanation:** Essentials Edition is designed for small businesses and supports up to **25 users and 50 devices**.

**Q2. Which of the following is NOT an advantage of Windows Server 2022?**

A) Centralization

B) Scalability

**C) High Battery Backup** 

D) Flexibility

**Explanation:** Battery backup depends on hardware (UPS), not on Windows Server.

**Q3. Which component converts a domain name into an IP address?**

A) DHCP

**B) DNS** 

C) LDAP

D) NTDS

**Explanation:** DNS translates human-readable domain names into IP addresses.

**Q4. Active Directory is primarily used to:**

A) Host websites

B) Manage printers only

**C) Centrally manage users, computers, and resources** 

D) Provide internet access

**Explanation:** Active Directory is Microsoft's directory service used for centralized management.

**Q5. Which protocol is used to access and search information in Active Directory?**

A) FTP

B) HTTP

**C) LDAP** 

D) SMTP

**Explanation:** LDAP is the protocol used to access and query directory services like Active Directory.

**Q6. Which file stores the Active Directory database?**

- A) boot.ini
- B) config.sys
- C) NTDS.dit** 
- D) pagefile.sys

**Explanation:** NTDS.dit is the main database file of Active Directory.

**Q7. Which server stores and shares files over a network?**

- A) Print Server
- B) File Server** 
- C) Web Server
- D) Proxy Server

**Explanation:** File Server provides centralized file storage and sharing.

**Q8. Which server hosts websites?**

- A) Database Server
- B) File Server
- C) Web Server** 
- D) Print Server

**Explanation:** A Web Server delivers web pages to users using HTTP/HTTPS.

**Q9. Which DNS record maps a domain name to an IPv4 address?**

- A) MX Record
- B) NS Record
- C) A Record** 
- D) CNAME Record

**Explanation:** The A Record stores the IPv4 address of a domain.

**Q10. Which DNS zone allows both reading and writing?**

- A) Primary Zone** 
- B) Secondary Zone
- C) Stub Zone
- D) Reverse Zone

**Explanation:** Primary Zone is the original DNS database where updates are made.

**Q11. Which installation option provides a graphical interface?**

- A) Server Core
- B) Desktop Experience** 
- C) CLI Mode
- D) Safe Mode

**Explanation:** Desktop Experience includes GUI, Start Menu, and File Explorer.

**Q12. Which installation option uses fewer system resources?**

A) Desktop Experience

**B) Server Core** 

C) GUI Mode

D) Explorer Mode

**Explanation:** Server Core has no GUI, making it faster and more secure.

**Q13. What is the main purpose of Group Policy (GPO)?**

A) Store databases

**B) Apply centralized settings to users and computers** 

C) Assign IP addresses

D) Host websites

**Explanation:** GPO helps administrators centrally configure and enforce policies.

**Q14. Which Active Directory object is used to organize multiple users together?**

A) User Object

B) Computer Object

**C) Group Object** 

D) Printer Object

**Explanation:** Group Objects simplify permission management by grouping users.

**Q15. Which Active Directory structure is the highest level?**

A) Domain

B) Tree

**C) Forest** 

D) Organizational Unit

**Explanation:** Forest is the highest-level container and can contain multiple trees.

**Q16. Which FSMO role is responsible for modifying the Active Directory Schema?**

A) RID Master

B) Infrastructure Master

**C) Schema Master** 

D) PDC Emulator

**Explanation:** Only the Schema Master can make changes to the AD Schema.

**Q17. Which IP address type is recommended for a Domain Controller?**

A) Dynamic IP

**B) Static IP** 

C) Private Dynamic IP

D) Public Dynamic IP

**Explanation:** A Domain Controller should always have a fixed (Static) IP address.

**Q18. Authentication is the process of:**

A) Assigning IP addresses

**B) Verifying the identity of a user** ✓

C) Giving file permissions

D) Installing software

**Explanation:** Authentication answers the question: "Who are you?"

**Q19. Which of the following best describes Access Control?**

A) Verifying username and password

**B) Determining what resources a user can access** ✓

C) Creating user accounts

D) Installing Active Directory

**Explanation:** Access Control decides what an authenticated user is allowed to do.

**Q20. Which statement about Domain Controller is correct?**

A) It hosts websites only.

B) It provides internet connectivity.

**C) It manages Active Directory and authenticates users.** ✓

D) It only stores files.

**Explanation:** A Domain Controller manages Active Directory, verifies user logins, and applies policies.

## Scenario-Based Hard + Conceptual MCQs (21–50)

**Q21. An organization wants all employees to log in using the same username and password from any domain computer. Which Windows Server feature enables this?**

A) DHCP

B) File Server

**C) Active Directory with Domain Controller** ✓

D) Proxy Server

**Explanation:** Active Directory with a Domain Controller provides centralized authentication across all domain-joined systems.

**Q22. An administrator changes the company wallpaper for the HR department only. Which Active Directory component is MOST likely used?**

A) Container

**B) Group Policy linked to HR OU** ✓

C) DNS Zone

D) LDAP

**Explanation:** GPO linked to an Organizational Unit allows department-specific settings.

**Q23. A company has 500 virtual machines running on a single physical server. Which Windows Server edition is the BEST choice?**

- A) Essentials
- B) Standard
- C) Datacenter** 
- D) Server Core

**Explanation:** Datacenter Edition supports unlimited virtualization.

**Q24. Users can log in successfully, but cannot access the Finance shared folder. Which concept explains this situation?**

- A) Authentication Failure
- B) Access Control (Authorization)** 
- C) LDAP Failure
- D) DNS Failure

**Explanation:** Authentication verifies identity, while Access Control determines permissions.

**Q25. An employee's password is reset by the IT administrator without accessing the employee's computer. Which Windows Server feature makes this possible?**

- A) DNS
- B) DHCP
- C) Active Directory** 
- D) Hypervisor

**Explanation:** Active Directory centrally manages user accounts and passwords.

**Q26. During installation, the administrator chooses an option without GUI to improve security and reduce resource usage. Which option was selected?**

- A) Desktop Experience
- B) GUI Installation
- C) Server Core** 
- D) Essentials Edition

**Explanation:** Server Core has no GUI and requires fewer resources.

**Q27. A company has offices in Delhi, Mumbai, and Bengaluru. Each office has its own Domain Controller, but user information is synchronized automatically. Which AD component handles this?**

- A) Global Catalog
- B) LDAP
- C) Active Directory Sites and Services** 
- D) NTDS

**Explanation:** Sites and Services manages replication between multiple locations.

**Q28. A user enters www.microsoft.com, and the system converts it into an IP address before opening the website. Which process is taking place?**

A) Reverse Lookup

**B) Forward Lookup** ✓

C) Authentication

D) Replication

**Explanation:** Forward Lookup converts Domain Name → IP Address.

**Q29. An administrator creates a new attribute called "Employee Code" for every user account in Active Directory. Which FSMO role performs this operation?**

A) RID Master

B) PDC Emulator

**C) Schema Master** ✓

D) Infrastructure Master

**Explanation:** Schema changes are handled only by the Schema Master.

**Q30. A company installs Windows Server and then installs AD DS before promoting it. What is the final role of this server?**

A) File Server

**B) Domain Controller** ✓

C) DNS Client

D) Workgroup Server

**Explanation:** Installing AD DS and promoting the server makes it a Domain Controller.

**Q31. Employees can search for users located in different branches without knowing which Domain Controller stores the information. Which AD component provides this feature?**

A) NTDS

**B) Global Catalog** ✓

C) GPO

D) OU

**Explanation:** Global Catalog contains searchable information about all objects in the forest.

**Q32. An administrator wants to apply different password policies to HR and IT departments. What should be created first?**

A) Forest

B) Tree

**C) Organizational Units (OUs)** ✓

D) DNS Zones

**Explanation:** Policies are generally linked to Organizational Units.

**Q33. Which scenario BEST represents Authentication?**

A) User opens the HR folder.

**B) User enters username and password to log in. ✓**

C) User receives file access.

D) User prints a document.

**Explanation:** Authentication verifies user identity before access is granted.

**Q34. A backup copy of the DNS database is maintained on another server for fault tolerance. Which DNS Zone is being used?**

A) Primary Zone

**B) Secondary Zone ✓**

C) Reverse Zone

D) Stub Zone

**Explanation:** Secondary Zone stores a read-only copy of the Primary Zone.

**Q35. A company wants to deploy Microsoft Office automatically to all computers in the Sales department. Which Windows Server feature should be used?**

A) DNS

**B) Group Policy (GPO) ✓**

C) LDAP

D) NTDS

**Explanation:** GPO supports centralized software deployment.

**Q36. Which Active Directory object should be used to assign permissions to 200 employees at once?**

A) User Object

B) Computer Object

**C) Group Object ✓**

D) Printer Object

**Explanation:** Permissions are assigned to groups instead of individual users.

**Q37. Which statement correctly explains the relationship between LDAP and Active Directory?**

A) LDAP stores user accounts.

**B) LDAP is the protocol used to communicate with Active Directory. ✓**

C) LDAP is another name for NTDS.

D) LDAP replaces DNS.

**Explanation:** LDAP accesses and searches information stored in Active Directory.

**Q38. A company's DNS server fails. Which service is MOST likely affected first?**

A) Printer Sharing

B) Software Installation

**C) Domain Name Resolution** ✓

D) USB Restrictions

**Explanation:** DNS failure prevents domain names from being resolved to IP addresses.

**Q39. Which of the following components actually stores Active Directory data?**

A) LDAP

B) Domain Controller

**C) NTDS Database (NTDS.dit)** ✓

D) GPO

**Explanation:** NTDS.dit is the database file containing AD objects.

**Q40. A company wants to ensure that all employees use passwords with a minimum length of 10 characters. Which Windows Server feature should be configured?**

A) DNS Policy

**B) Group Policy (Password Policy)** ✓

C) Proxy Server

D) NTDS

**Explanation:** Password policies are configured using Group Policy.

**Q41. A company owns two domains: abc.com and xyz.com, each with its own namespace.**

**Together they form a:**

A) Domain

B) Tree

**C) Forest** ✓

D) Organizational Unit

**Explanation:** Multiple trees with different namespaces form a Forest.

**Q42. A server must always be reachable at the same network address because it hosts DNS and Active Directory. Which IP configuration is appropriate?**

A) Dynamic IP

**B) Static IP** ✓

C) APIPA Address

D) Loopback Address

**Explanation:** Servers providing critical services require a Static IP.

**Q43. Which server type should be installed to centrally store company documents?**

- A) Database Server
- B) Proxy Server
- C) File Server** 
- D) Print Server

**Explanation:** File Servers provide centralized file storage and sharing.

**Q44. A user successfully logs in but cannot modify a confidential document due to insufficient permissions. Which concept is demonstrated?**

- A) Authentication Failure
- B) Authorization (Access Control)** 
- C) DNS Lookup
- D) Replication

**Explanation:** Authorization controls what authenticated users can do.

**Q45. Which component defines which attributes (Name, Email, Department, etc.) a User Object can contain?**

- A) Global Catalog
- B) NTDS
- C) Active Directory Schema** 
- D) DNS

**Explanation:** Schema defines the structure and attributes of AD objects.

**Q46. During a search operation, LDAP communicates with which component to retrieve user information?**

- A) DHCP
- B) Hypervisor
- C) Active Directory / NTDS Database** 
- D) Proxy Server

**Explanation:** LDAP queries Active Directory, which retrieves data from NTDS.

**Q47. An organization has a parent domain company.com and child domains hr.company.com and it.company.com. This structure is known as:**

- A) Forest
- B) Tree** 
- C) Organizational Unit
- D) Global Catalog

**Explanation:** Related domains sharing the same namespace form a Tree.

**Q48. An administrator wants users in different offices to locate resources quickly without searching every Domain Controller. Which component should be used?**

A) Group Policy

**B) Global Catalog** 

C) DHCP

D) Server Core

**Explanation:** Global Catalog enables fast searching across the forest.

**Q49. Which Windows Server feature acts as the "brain" for user authentication and centralized management?**

A) DNS Server

B) File Server

**C) Active Directory Domain Services (AD DS)** 

D) Proxy Server

**Explanation:** AD DS provides centralized authentication and resource management.

**Q50. An administrator accidentally edits a record in the Secondary DNS Zone but receives an error. Why?**

A) Secondary Zones do not support DNS.

B) Secondary Zones use Dynamic IP.

**C) Secondary Zones are read-only copies of the Primary Zone.** 

D) Secondary Zones cannot store records.

**Explanation:** Only the Primary Zone allows direct modifications; Secondary Zones are read-only replicas.
